SUMMARY

Trained as a Chemist, Jianmin Chen received his M.S. degree in Analytical Chemistry in 1990 and Ph.D. degree in Physical Chemistry in 1993 from the Fudan University, Shanghai, China. He received directly the lecturer position and worked on solid superacid catalysis in the Chemistry Department at the same university. After his visiting to University of Pittsburgh, he moved to the Department of Science and Engineering at Fudan University, and working the atmospheric heterogenous reaction and cleaning production process of purifying anti-cancer paclitaxel, and bio-fuel. CS₂, COS, DMS and SO₂ are very important atmospheric sulfur-containing compounds. It is well accepted that the atmospheric reaction of CS₂ with HO• is an important source of COS as well as the dominant sink of CS₂ in the atmosphere. Prof. Chen's group found that the catalytic oxidation of CS₂ over atmospheric particles or mixed aerosols may be an important way of the conversion from CS₂ or COS to sulfate close to the Earth's surface (Environ. Sci. Technol. 2001; 2007). The adsorption of SO₂ on the α-Fe₂O₃ surface results in the formation of sulfate complexes (J. Phys. Chem. C, 2007; 2009). Last two decades, Dr. Chen's interests mainly focus on atmospheric chemistry and the impact on air quality and public health. He leads one of the pioneers in atmospheric sciences in China, works on the control severe haze episodes often occurred in China. His group is working on the field observation and laboratory study of the nucleation, biomass burning, and haze formation mechanism. In his group, a series of advanced instruments has been built up such as self-designed aerosol chamber (Atmos. Environ. 2008; Environ. Sci. Technol. 2011; Atmos. Chem. Phys. 2017) and on-line versatile aerosol concentration enrichment system (VACES) for bio-toxic aerosol analysis (Atmos. Meas. Tech. 2021), wide-range particle spectrometer, LC Q Tof-MS, GCxGC Tof-MS, ATOFMS, TDMA, Laser-CRDS, Nephelometer et al., to investigate size distribution, hygroscopicity, optical property and chemical composition in PM_{2.5}, Cloud, Fog and Frost. He has understood the evolution of inorganic secondary aerosol with organic matter in air quality and its links with biomass burning, coal-combustion, ships emission and fireworks. His made a great achievement to significantly decrease haze episode days, particularly because of biomass burning and Chinese Spring Festival fireworks, after his research report has been adopted to air pollution control strategy.

Dr. Chen has been honored as the University Distinguished Professor since 2012. He is currently the Executive Dean, Institute of Atmospheric Sciences and Director of the Shanghai Key Laboratory of Atmospheric Particle Pollution and Prevention (LAP³) in the Department of Environmental Science & Engineering. He has a long-term collaboration of co-papers, training programs and research projects with Atmospheric Chemistry Scientists, Dr. Abdelwahid Mellouki in CNRS-ICARE and Dr. Christian George in CNRS-IRCELYON (France) and Prof. Dr. Hartmut Herrmann TROPOS (Germany), as well as international collaboration with University of Helsinki (Finland), University of East Anglia (UK), University of Manchester (UK), Colorado State University (USA), University of Toronto (Canada), and Queensland University of Technology (Australia). Dr. Chen has published over 460 papers, citation times 12,200+, H-index 56, 34 Chinese patents and 2 USA patents. He is PIs of 23 projects founded by National Science Foundation of China (NSFC), Ministry of Science and Technology, Ministry of Education of China, et al.. Dr. Chen has served on many panels including NSFC since 2005. He is currently Associate Editors for the Journal of Geophysical Research: Atmosphere, Science of the Total Environment and Heliyon Environment, and editorial board members for several other international journals in related fields. He is a member of IUGG-China Group, IGAC-China Group. He received many honors and awards including the Clarivate Highly Cited Researcher 2020, Chevalier dans L'ordre des Palmes Cadémiques in 2015, State Council Special Allowance Expert by the State Council of the People's Republic of China in 2015, Baosteel Distinguished Teacher Award in 2010, the 1st Rank Award of Natural Sciences Achievement by the Ministry of Education of China in 2009, and the 1st Rank Award of Teaching by the Shanghai Municipal Education Commission in 2017.
